Company profile

The Monte Construction Limited is a family business with extensive Eastern European and United Kingdom experience in general construction and refurbishment.

Flexibility and 35 years experience in construction industry are the core values that enabled to lead and accomplish successfully variety of new construction, alteration, structure extension and loft conversion projects. We can assist in the implementation of new construction projects, reconstruction works and property maintenance to private, commercial and public sectors and have extended our business to design and structural engineering services.

The management team treats each project as unique and works to satisfy specific customers' needs.

We possess BSc Civil Engineering and Technology, BSc Industrial Engineering, PGDip Management, PGDip Financial Strategy, MSc Management and Business Administration certificates and strive to keep high standards in every job we do.

Shell and Core

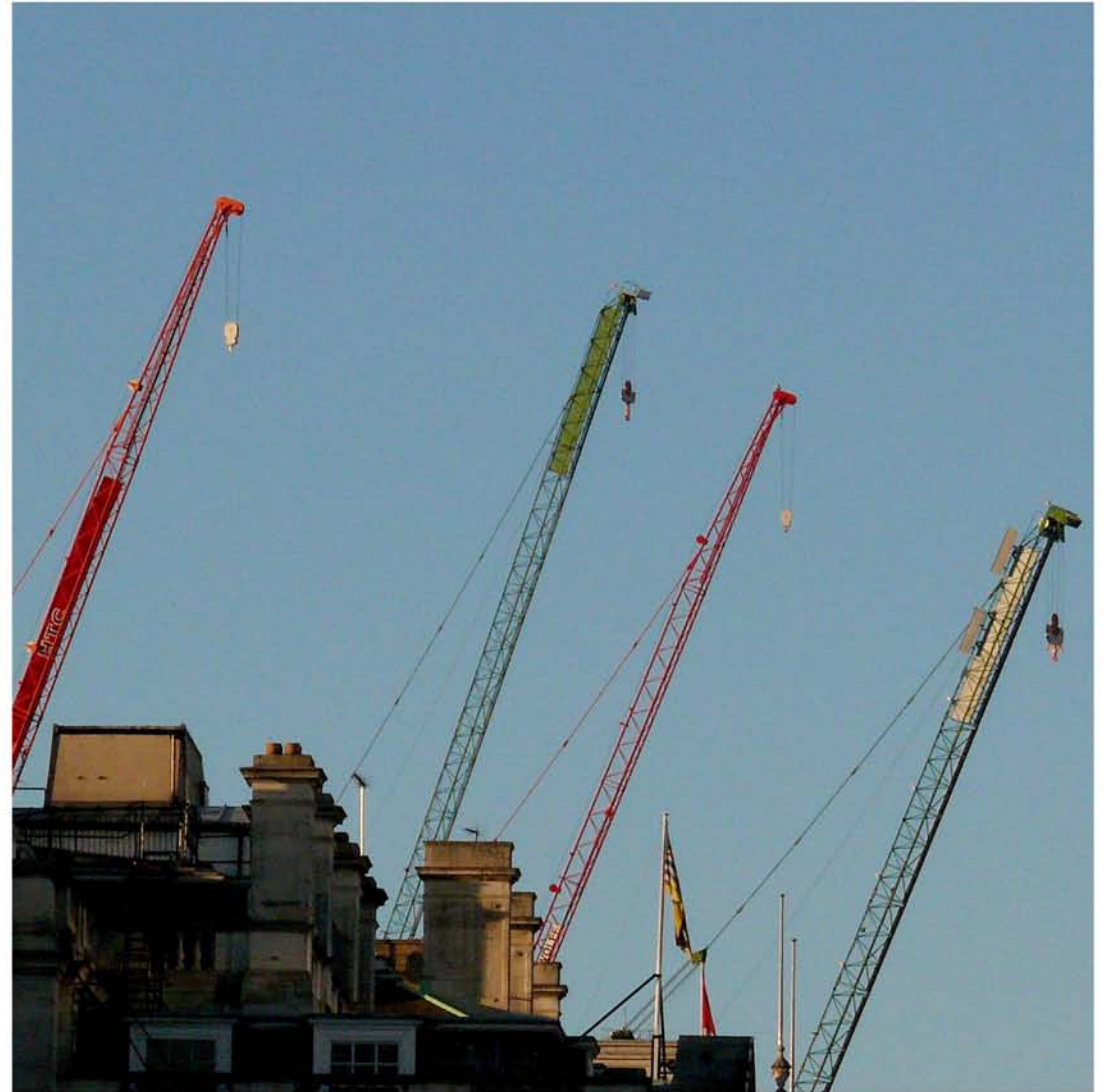

Based on the information contained within the ground investigation report and depending on the type of structure being built, we are able to lay shallow concrete foundations, such as strip footings and pad foundations, set up foundation blocks, build reinforced concrete raft foundation and pile type deep foundations.

We may also assemble ground drainage, sewage and rainwater systems, gas pipe, electricity supply and communication systems along with the installation of the foundations.

According to the solutions proposed by structural engineers, we are capable to build steel, reinforced concrete, timber or masonry frame and construct the staircase of the building.

Depending on the project requirements, we may build external walls from different types of bricks, blocks, concrete, wood, metal, install acoustic and thermal insulations along with ventilation systems.

We may construct a frame of pitched and flat roofs, assemble a roof decking, incorporate thermal and acoustic insulations, and set up water proofing and ventilation systems. Our roofers have extensive skills including everything from lead work and flashing to slate tile or thatched roof work.

Central Heating and Air Conditioning

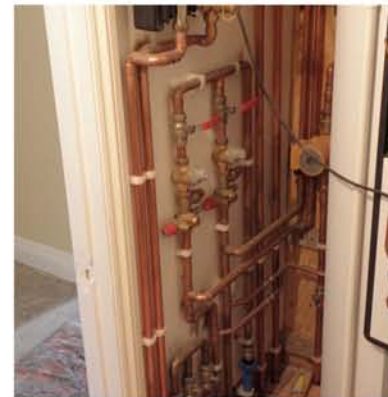

Based on the purpose of the building and availability of the energetic resources we may install electric and gas heating systems. Moreover, installation of electric or water under floor heating is also available.

Mainly, we install mechanical kitchen extract fans and bathroom extractors as well as extractors with incorporated humidity sensors. We may also assemble ventilation ducts and install air conditioners.

We may install cold and hot water pipelines and assemble sewerage systems according to the project requirements.

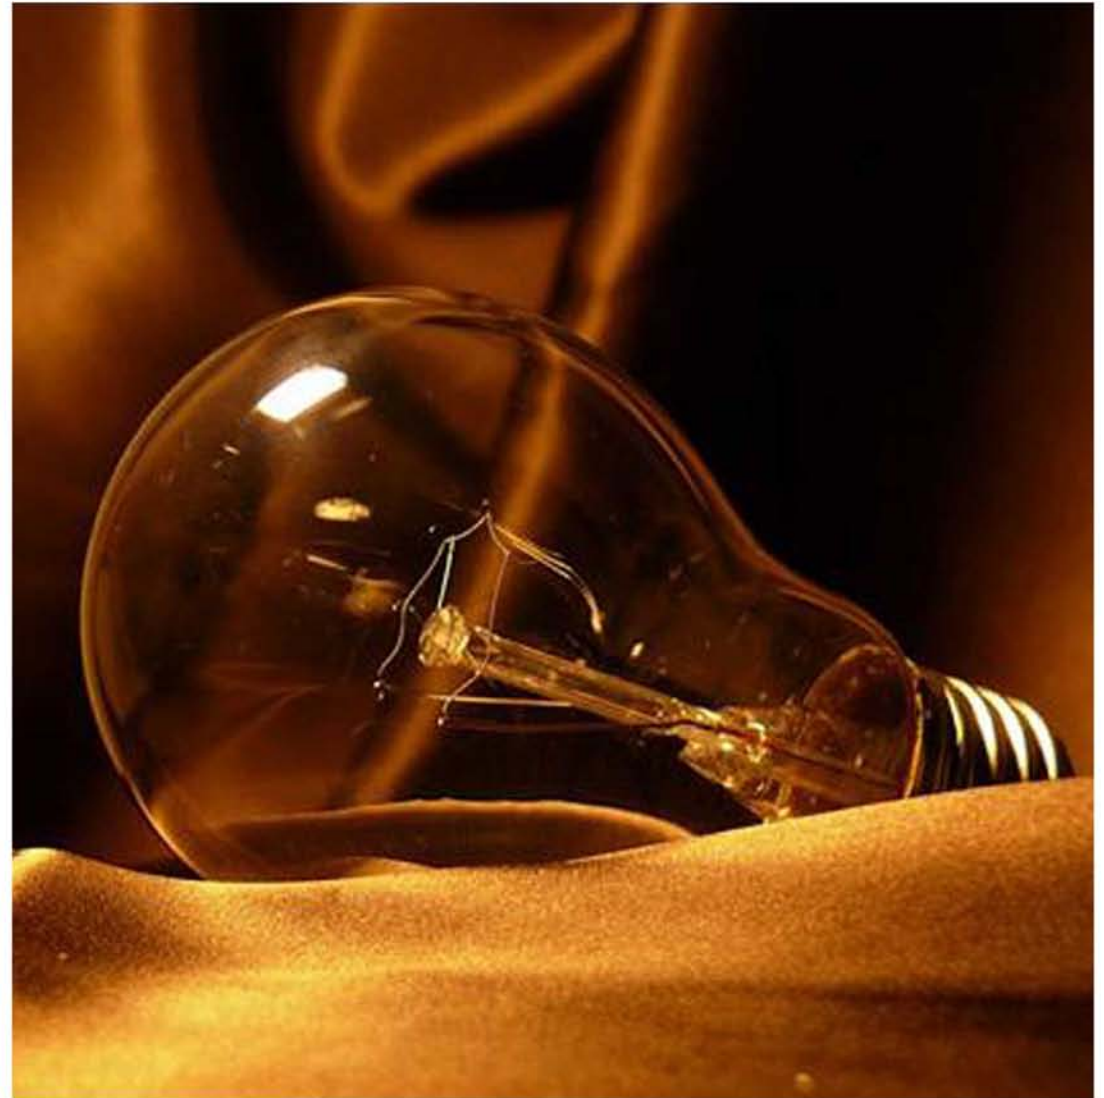

Our services also involve assembling gas pipes and pipes' attachment to gas applications.

Work examples

Electrical

We install complex electrical distribution equipments and electrical cables to enable the supply of electricity for lights, electric sockets and various electrical applications.

Work examples

Finish and Decoration work

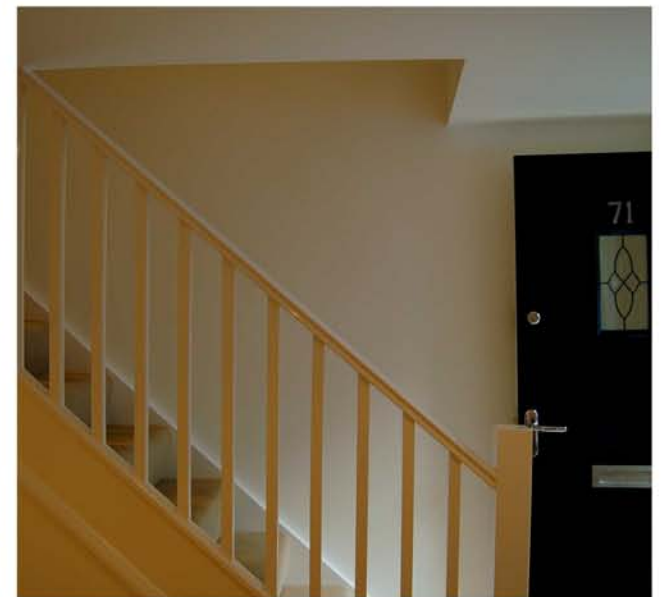

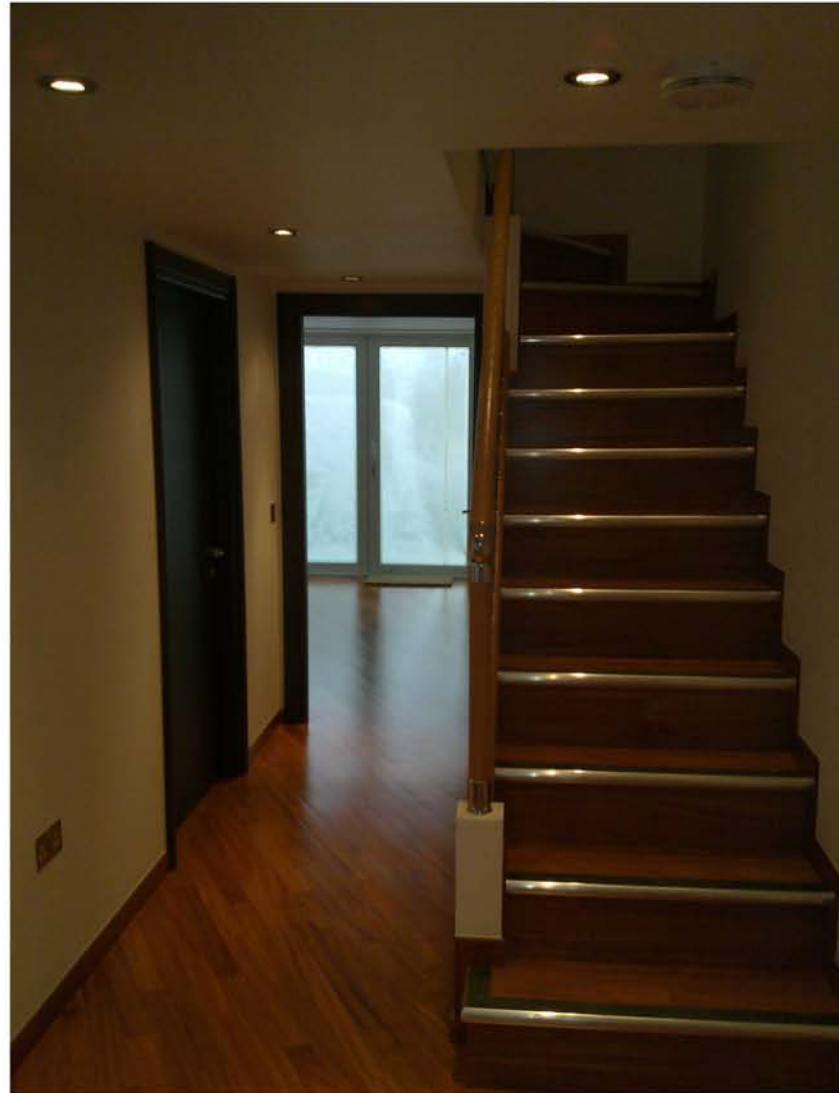

We prepare wall, ceiling and floor surfaces for decoration and depending on the customer needs we may offer wide range finishes.

Our services involve painting, tiling, hanging wallpaper and fitting wooden or plastic panels on walls.

We can paint ceilings and assemble wooden or plastic panel ceilings, also to fit suspended ceilings as well.

We may paint, tile floors as well as fit laminate, vinyl, hardwood or carpet flooring.

Work examples

Work examples

Refurbishment, Alterations and Maintenance

We carry out all kind of refurbishment or alteration works required to refresh a property before renting or placing on market for sale.

Where staircases need to be finished, we can assemble metal or wooden balustrades and handrails, and offer tiling, carpeting or laying hardwood for stair treads.

Maintenance services are also available.

We may assist with general home fittings such as shelves, cupboards, wardrobes, curtain rails, mirrors, taps, mixers, showers, lights or other.

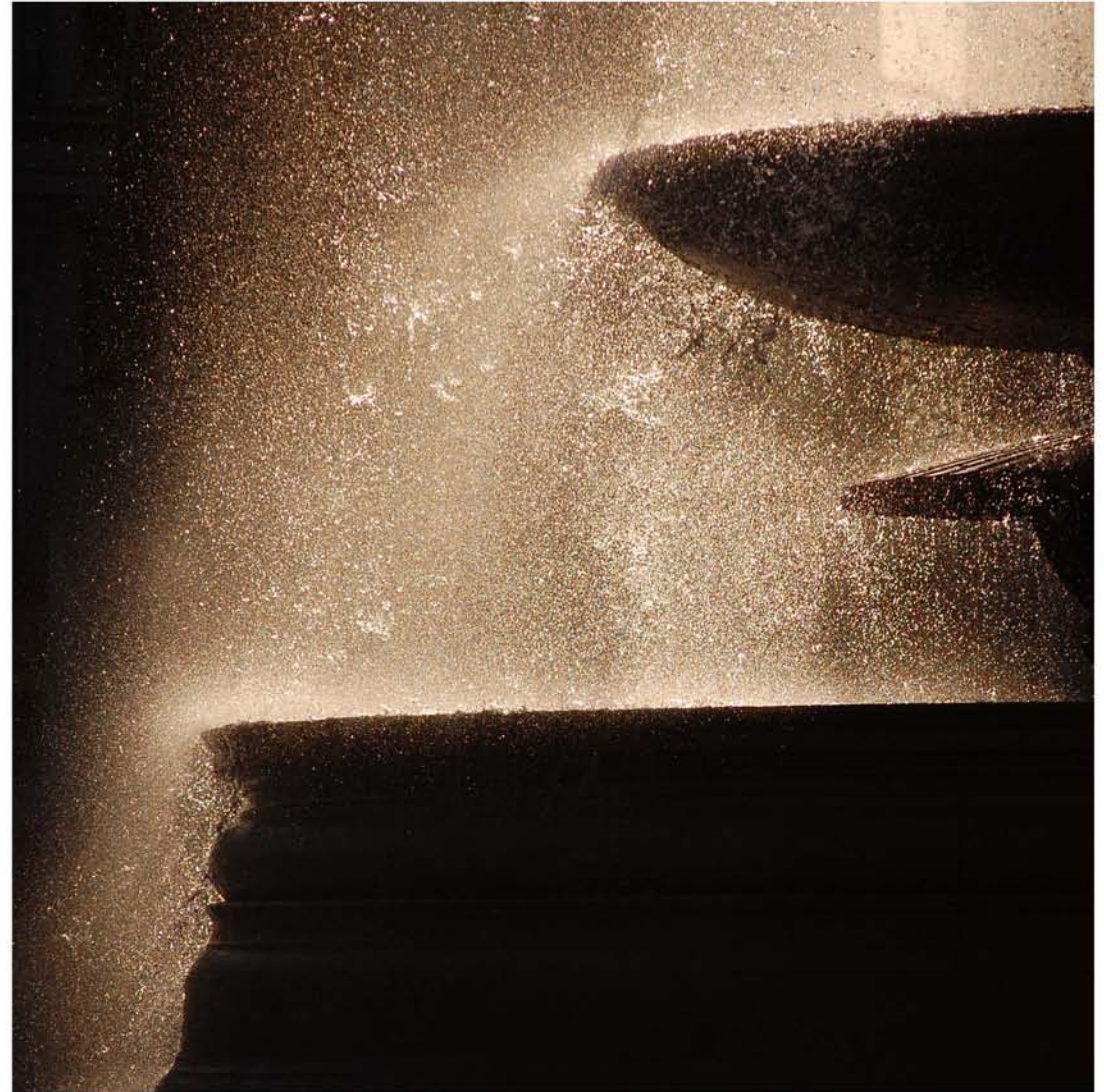

Work examples

Kitchen and Bathroom fit-out

Kitchen and Bathroom fit-out requires the most near work. We at Monte Construction Limited are pride to offer the highest standard of finishing these particular projects.

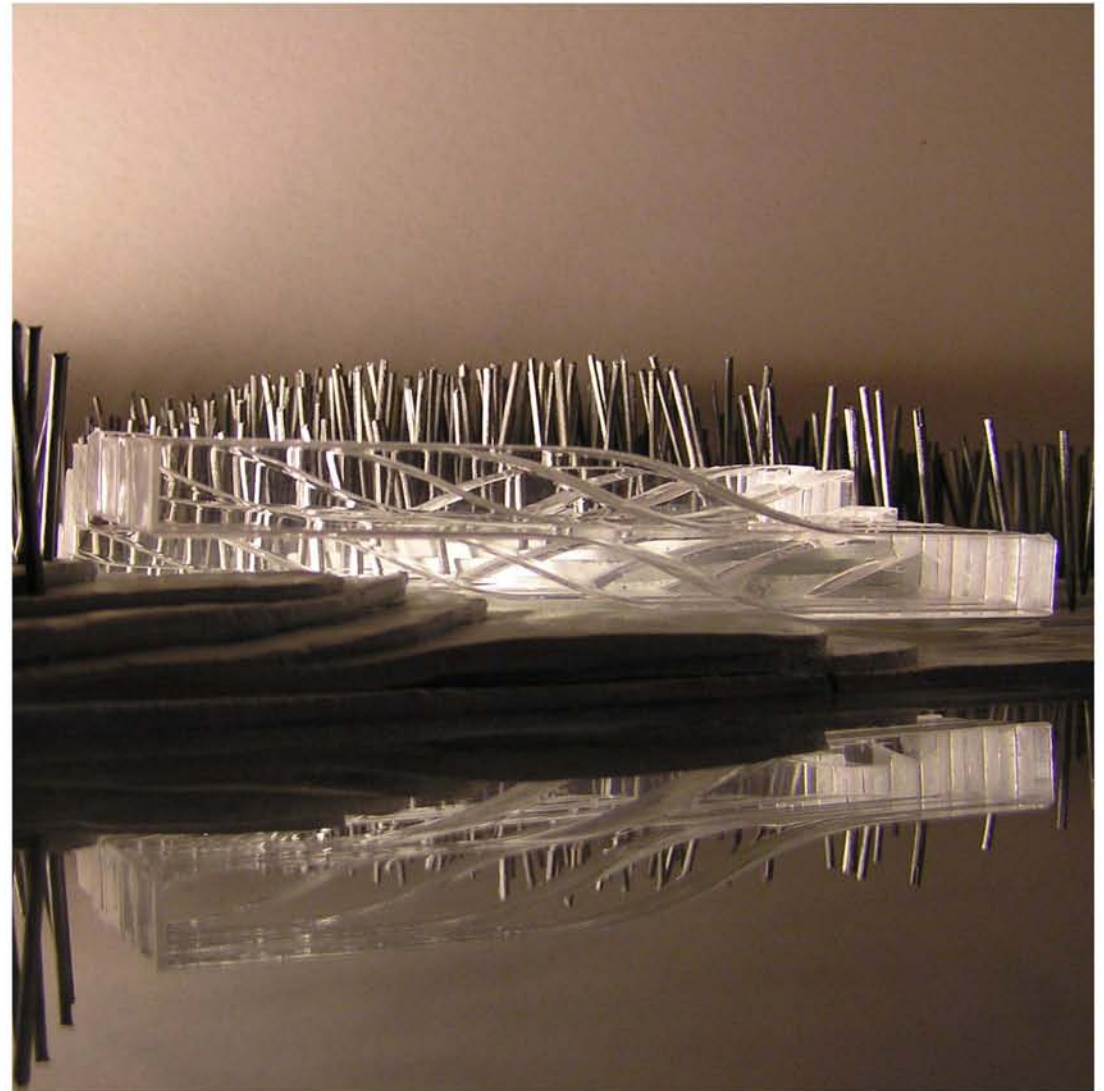

Work examples

Cleaning

Our projects are accomplished with debris disposal and cleaning work.

Design and Structural Engineering consultancy

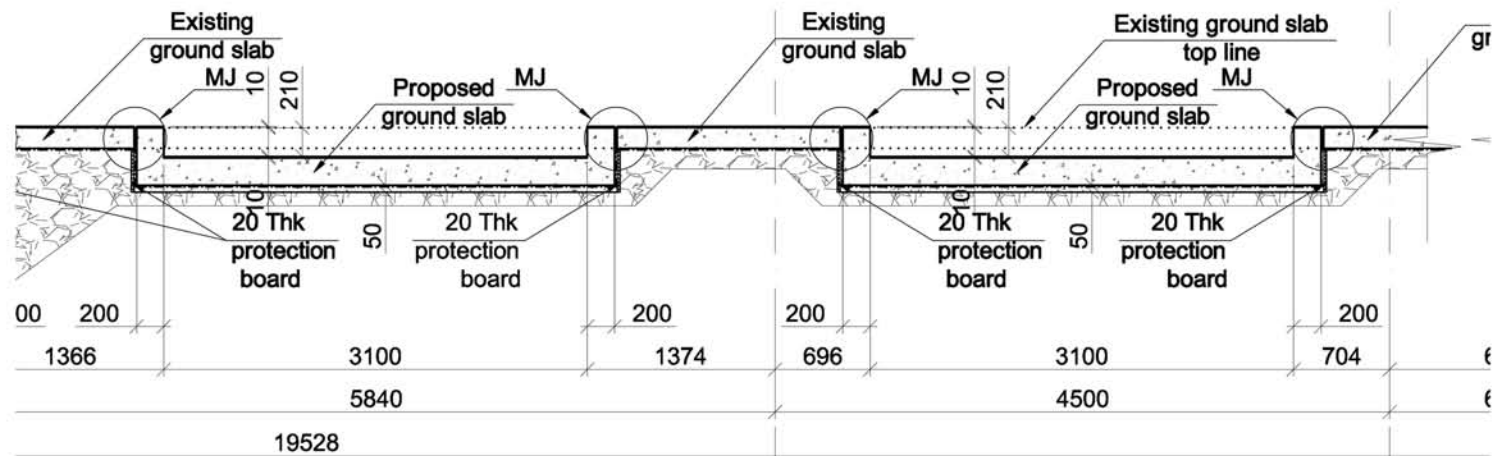

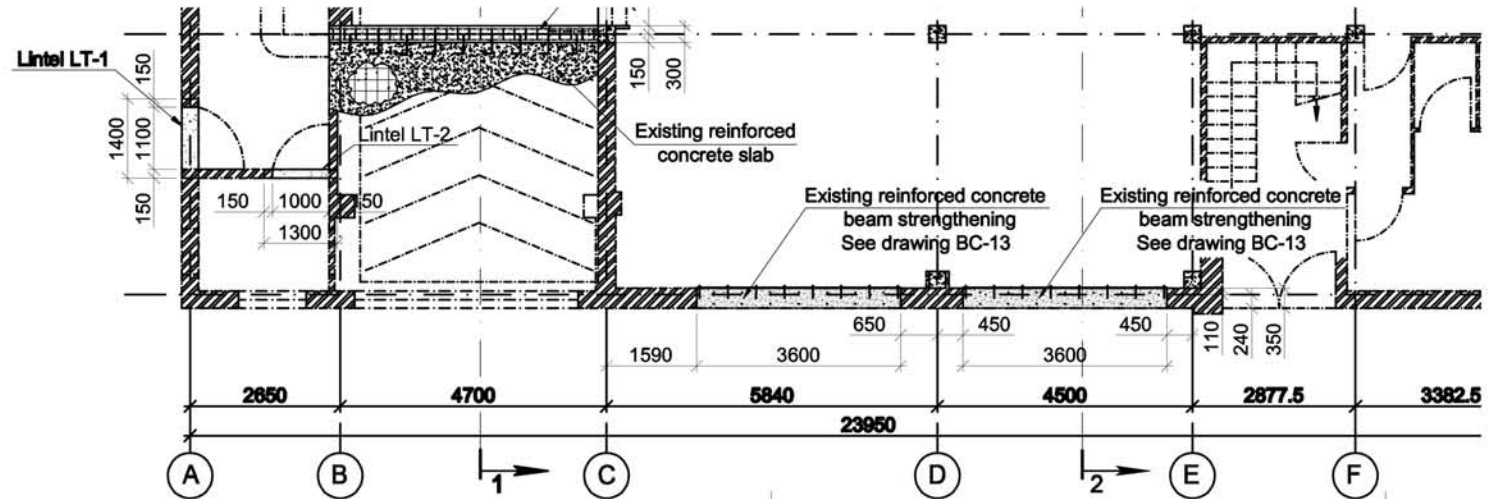

Depending on clients' needs, we can provide design and structural engineering services.

Design

We can offer design services, including designing, consulting the client during the entire project making process on diverse aspects, starting from source sketches to completion. Also supervising of architectural parts of projects on site, producing drawings and visualisations for interior or exterior design.

PROPOSED GROUND SLAB SECTION 3-3
Scale 1:50

Structural Engineering

We are capable to offer structural engineering services on various projects, including analysis and design of steel, timber, masonry and reinforced concrete structures in accordance with British Standards and Eurocodes.
